PROFILE

Third-year Finance major at Wuhan University with a portfolio of self-built valuation, M&A, and LBO models, and a prior investment banking internship. I build financial models and interactive tools programmatically in Python and publish them to my portfolio website. Strong interest in deal evaluation and corporate finance, with a cross-border perspective spanning Thailand, China, and Southeast Asia.

EDUCATION

Wuhan University - School of Economics and Management Sep 2024 to 2028 (expected)
BBA, Finance major | GPA 3.66

Saint Thomas School Thailand
Science-Medical Program

EXPERIENCE

Bualuang Securities - Investment Banking Intern 2024

- Prepared market reports to support the investment banking team's analysis.
- Read and analyzed assigned research articles and company materials, summarizing key takeaways for the team.

Hat Yai Hospital - Volunteer Doctor's Assistant 2023

- Assisted doctors during rounds; developed discipline, attention to detail, and composure in a demanding professional environment.

PROJECTS

Equity Research - Airports of Thailand (AOT.BK)

- Built a full financial model (3-statement, 5-year forecast, DCF, comparable-company analysis, WACC, and sensitivity tables) and an 8-section research report; concluded a Hold rating, with a DCF target of ~27.77 THB versus a ~64.50 THB market price.

M&A Analysis - GME / eBay and Kimberly-Clark / Kenvue

- Built accretion/dilution models and an M&A memo analyzing the earnings impact of acquisitions; for Kimberly-Clark / Kenvue, found ~30% adjusted-EPS accretion requiring only ~12% of synergies to break even despite a 46% premium.

Interactive M&A and LBO Tools

- Built a browser-based "Universal M&A Modeler": enter any acquirer and target, then adjust deal levers (cash/stock split, synergies, offer premium, interest rate) with live sliders to see accretion/dilution, pro-forma EPS, leverage at close, and a feasibility flag update in real time.
- Built a Planet Fitness LBO model and a reusable, browser-based LBO modeler that runs a leveraged-buyout analysis for any company from user inputs.

Additional valuation models

- Sea Limited DCF, IonQ equity research model, and a Thai IPO tracker, covering discounted-cash-flow valuation, equity research, and new-issue screening.

AI-Augmented Equity Research Workflow - BDMS (in progress)

- Developing a workflow that applies AI tools to parts of the equity research process, using Bangkok Dusit Medical Services as the case study.

CERTIFICATIONS

- Bank of America - Investment Banking (Forage job simulation)
- Citi - Finance (Forage job simulation)

SKILLS & LANGUAGES

Financial modeling & valuation: DCF, comparable companies, LBO, M&A accretion/dilution, 3-statement modeling (Excel).
Technical: Python (openpyxl, programmatic model building), HTML dashboards, GitHub Pages; Adobe Photoshop, Premiere Pro.
Languages: Thai (native), English (IELTS 6.5), Mandarin Chinese (learning; preparing for HSK 4).
